

Website Page Logic & Detailed Development Requirements

Detailed Technical Brief

1. Global Navigation & Architecture

- **Frontend Framework:** Recommended: React or Vue.js, ensuring a smooth Single-Page Application (SPA) experience.
- **Multi-Language Support:** Reserved interface for Chinese / English / Japanese (three-language) switching.
- **Search Functionality:** Site-wide sticky search bar at the top, supporting fuzzy matching for product model numbers (e.g., XP40) and keywords.

2. Module Breakdown

2.1 Product Framework Module

- **Hierarchy Logic:**
 - Navigation Bar → Series Page (L2) → Product Detail Page (L3)
- **Detail Page (L3) must include:**
 - Media Components: High-resolution image carousel, 360° rotating view, short product feature explainer videos.
 - Specification Parameters: Structured table (dimensions, material, power, drainage method).
- **Backend Requirements:**
 - Product library must support one-click bulk import/export (CSV/Excel).
 - Supports scheduled publishing by launch date (e.g., 2Q26).

2.2 Design Inspiration Module

- **Design Story Page:**
 - Layout: Timeline or Masonry (waterfall) layout.
 - Supports large-image Parallax Scrolling effect.

- **Project Cases (Projects):**
 - Must include Map API integration to display global key project geographic locations.
 - Tag system: supports filtering by 'Commercial', 'Residential', 'Hotel'.

Note: All pages in this module are static pages or animated visuals using the same template.

2.3 Corporate & Blog Module

- **Company History:**
 - Interactive timeline where year labels dynamically highlight as the user scrolls.
- **News Filter:**
 - Logic: Filter by keyword search.
 - SEO-Friendly: Each blog article must generate an independent Canonical URL.
 - Clicking a news item navigates to its detail page.

2.4 Service & Support Module (High-Priority Interactions)

- **Store / Dealer Locator:**
 - Integrated with Google Maps.
 - Features: 'Auto-locate nearby stores' and 'Get Directions' navigation redirect.
- **Inquiry Form:**
 - Field Validation: Required field validation (name, email, product serial number).
 - Logic Routing: Upon submission, the form is automatically forwarded to the corresponding department mailbox based on the user's selected 'Inquiry Type' (After-Sales / Purchase / Business).
 - Anti-Spam: Must integrate Google reCAPTCHA v3.
- **After-Sales Service Process & Application Form:**
 - A clear After-Sales button must be placed in the upper-right corner of the website homepage.
 - Clicking it navigates to the after-sales process page, where users can choose: Phone Consultation (displays after-sales phone number), Email Consultation (navigates to form for customer information), or Online Video Consultation.
- **FAQ Page:**
 - Single page; clicking the '+' icon on the right reveals detailed information for each item.
- **Installation & Repair Video Page:**
 - Supports categorized video uploads: Installation Videos / Repair Videos.
 - Integrated search functionality.

2.5 Product Registration Module

- **Verification Mechanism:**
 - A product serial number (Serial Number) database must be established. The client will provide the data list, to be uploaded to the backend for product authenticity verification.
- **User Center:**
 - After registration, an 'Electronic Warranty Card' is automatically generated, recording the purchase date and warranty expiry date.

3. Non-Functional Requirements

Dimension	Requirements
Performance	Homepage load time < 2s; Lighthouse performance score 90+; CDN acceleration enabled site-wide.
Security	Full-site HTTPS encryption; SQL injection prevention; backend login requires Two-Factor Authentication (2FA).
CMS Backend	Must include a WYSIWYG editor to enable non-technical staff to update blog posts and product images.
Compatibility	Full compatibility with the latest versions of Chrome, Safari, and Edge; native iOS and Android browsers.
